GOALS

Work in an organization where I can develop and contribute with as much value as I can.

WORK EXPERIENCE

Sigma IT Consulting - Stockholm

2019/08 - Ongoing...

Frontend Developer consultant at Sigma IT Consulting AB.

- Telia / Halebop

Halebop is a mobile operator that sells mobile subscriptions and mobile phones. This assignment meant being part of the frontend team at halebop.se.

The assignment consisted of tasks such as refactoring from Angular to VueJS, making unit tests for VueJS, development of features such as FAQ, designing and collaboration with the market team to make different ad campaigns for halebop.se.

Techniques and methods used:

VueJS, Jest, Sass, Magnolia CMS, JavaScript, Scrum, GitHub, Pull requests ...

- BlueAir Cabin Air

BlueAir Cabin Air is a company that develops and creates air filtration systems for cars. The air quality project was founded on BlueAir Cabin Air's need to create a mobile application that presents information and their backend data from various API endpoints.

My contribution in this project was to develop the outer layer and to connect data from APIs using techniques such as React Native and TypeScript.

Techniques and methods used:

React Native, TypeScript, JavaScript, Scrum, GitHub, Pull requests ...

- Sigma IT Consulting

Sigma is a company group with consultancy in IT, information logistics, engineering services, technical R&D and several other industries.

This assignment was to develop an internal network for the consultants and create work events in an engaging way. This was done through an exploratory map view where employees can see and interact with their colleagues that are currently out on different assignments.

This project was built from the ground up and required both backend development and frontend development. My contribution was to create the frontend client using ReactJS and TypeScript, client styling, connect the frontend with the backend and integrate services like the Google Maps API.

Techniques and methods used:

ReactJS, TypeScript, GraphQL, MongoDB, JavaScript, Scrum, GitHub, Pull requests ...

Nicknamed AB - Stockholm

2017/11 - 2019/06

Frontend developer position. Developing fintech and web solutions for Svea Ekonomi.

- **Credex**

Web application to apply for a loan. Redesign of current website to increase the company's trustworthiness, understanding and accessibility for mobile units.

This project required design knowledge, development and producing requirements specification based on Svea ekonomis requests and needs. My contribution was to develop the app using GatsbyJS and also create wireframes in Sketch.

Techniques and methods used:

JSX, CSS-in-JS, JavaScript, TypeScript, ReactJS, GatsbyJS, Emotion-js, Webpack, Babel, ESLint, Prettier, Scrum, GitHub, Pull requests ...

- **Feature workflow**

Investigation how native-functionalities such as scroll to snap are implemented in mobile native applications using WebView, among others.

The development and survey were done in a simpler way to implement offers and feature campaigns in SVEA economy's mobile banking applications.

Techniques and methods used:

ReactJS, React Native, TypeScript, EmotionJS, Scrum, GitHub, Pull requests ...

- **Marketing site for SVEA ekonomi**

Beta-site for SVEA economy banking services and campaigns. This project consisted of development of the presentation and onboarding functionality developed in GatsbyJS which is a ReactJS based, GraphQL driven static site generator.

Techniques and methods used:

JSX, CSS-in-JS, JavaScript, TypeScript, ReactJS, GatsbyJS, Emotion-js, Webpack, Babel, ESLint, Prettier, Scrum, GitHub, Pull requests ...

- Zimply innovation - company website

Development and design of a server-side website for a company in automation and AI. The purpose of the project was to showcase the company, describe which customers they have and show what services the company offers.

My contribution was design and development. This included frontend development and producing case pictures and videos using software such as Sketch and Photoshop. The project was carried out agile with daily contact and reconciliation with the client.

Techniques and methods used:

HTML, CSS, JavaScript, Bootstrap, WordPress, Scrum, GitHub, Pull requests ...

- Backoffice

Backoffice is a client-based customer service platform that is intended for employees in banking and finance to be able to provide support to their customers more easily.

This project involved refactoring from Angular to ReactJS due to customer requirements, component based development of new features using ReactJS and Svea ekonomis APIs linked to Svea ekonomis backend servers.

The project's planning and working method applied Scrum with sprints, daily stand-up meetings and time reporting linked to feature cards.

Techniques and methods used:

JSX, CSS-in-JS, JavaScript, TypeScript, React, GatsbyJS, Emotion-js, Webpack, Babel, ESLint, Prettier, Scrum, GitHub, Pull requests ...

- Nicknamed - company website

The purpose of this project was to redesign the company website to show more information of the company's assignments, customers and offers.

My contribution was to develop the server-side website using HTML, CSS and JavaScript. Bootstrap and Media Queries were applied to get a consistent grid-based layout to make the website responsive and accessible for all devices.

Techniques and methods used:

HTML, CSS, Bootstrap, JavaScript, Gulp, Scrum, GitHub, Pull requests ...

EDUCATION

- Halmstad University** 2014/09 - 2017/09
Bachelor's degree informatics, web development. Various courses that included database management, interactivity, user experience, web development and more.
- Luleå University of Technology** 2017/05 - 2017/08
Web Development II - Script languages & databases 7.5 credits.
- Örebro University** 2012/08 - 2012/11
Engineer course in drawing techniques and solid modeling (CAD), 7.5 credits.
- Karolinska Läroverket Senior High School - Örebro** 2009/08 - 2012/06
Natural science studies program.

ACTIVITIES, LANGUAGE & OTHER SKILLS

Swedish: *Mother tongue*
English: *Full professional proficiency*

Programming languages: *JavaScript, HTML, CSS ...*
Frameworks, technologies & libraries: *React, Vue, TypeScript, Node.js, GraphQL, MongoDB, Sass, Css-in-js, styled-components, Webpack, Babel ...*

Software

Handles basic programs that include the MAC OS and Windows (Word, Excel, Sketch, and Adobe's software suite as: (Photoshop, Illustrator, etc)).

About me

Food enthusiast and travel freak with a passion for minimalistic and elegant design. In my spare time I like to travel, play video games, play the guitar and spend time with friends and family.
